Summary	The early phases of psychosis, including the prodrome, often feature educational/occupational difficulties and various symptoms and signs, that can render or keep youths “Not in Employment, Education or Training” (NEET). Conversely, NEET status itself may increase risk for illness progression and impaired functioning, and impede access to appropriate services for psychosis. As these issues have not been investigated, we aimed to examine differences in the illness and care pathways and characteristics of youths with psychosis who are NEET and non-NEET.
Does the paper refer to People with Mental Health Problems, NEETs or MH NEETs?	MH NEETs

<p>What types of intervention or methodology of career counselling / vocational training / career intervention or good practice are mentioned?</p>
